

Daily Budget vs. Daily Spending

Renzo Paredes

DATA211: Data Science and Visualization

May 2025

 by Renzo Andre Paredes Benites

Project Overview

Analyze personal spending patterns

Compare planned vs. actual finances

Two-week data collection period

Daily tracking of budget and expenses

Personal finance relevance

Improve financial awareness and decision-making

Research Question & Hypotheses

Research Question

Is there a significant difference between planned budget and actual spending?

Null Hypothesis (H_0)

$$H_0 : \mu_d = 0$$

No difference between budget and spending

Alternative Hypothesis (H_1)

$$H_a : \mu_d \neq 0$$

Significant difference exists

	A	B	C
1	Date	Daily_Budget	Daily_Spending
2	4/6/2025	42	64.4
3	4/7/2025	39	61.2
4	4/8/2025	43	35.35
5	4/9/2025	47	44.8
6	4/10/2025	38	28.47
7	4/11/2025	38	33.54
8	4/12/2025	47	56.16
9	4/13/2025	43	63.25
10	4/14/2025	37	110.12
11	4/15/2025	42	29.74
12	4/16/2025	37	30.87
13	4/17/2025	37	3.45
14	4/18/2025	41	30.15
15	4/19/2025	30	34

Data Collection Methodology

Duration & Frequency

14 consecutive days

Daily recording, same time each evening

Variables Measured

Daily budget (USD): planned spending

Daily actual spending (USD): receipts and transactions

Collection Tools

Excel spreadsheet for recording

Mobile banking app for verification

Daily Comparison: Line Plot

Visualization Choice

Line plot shows temporal patterns

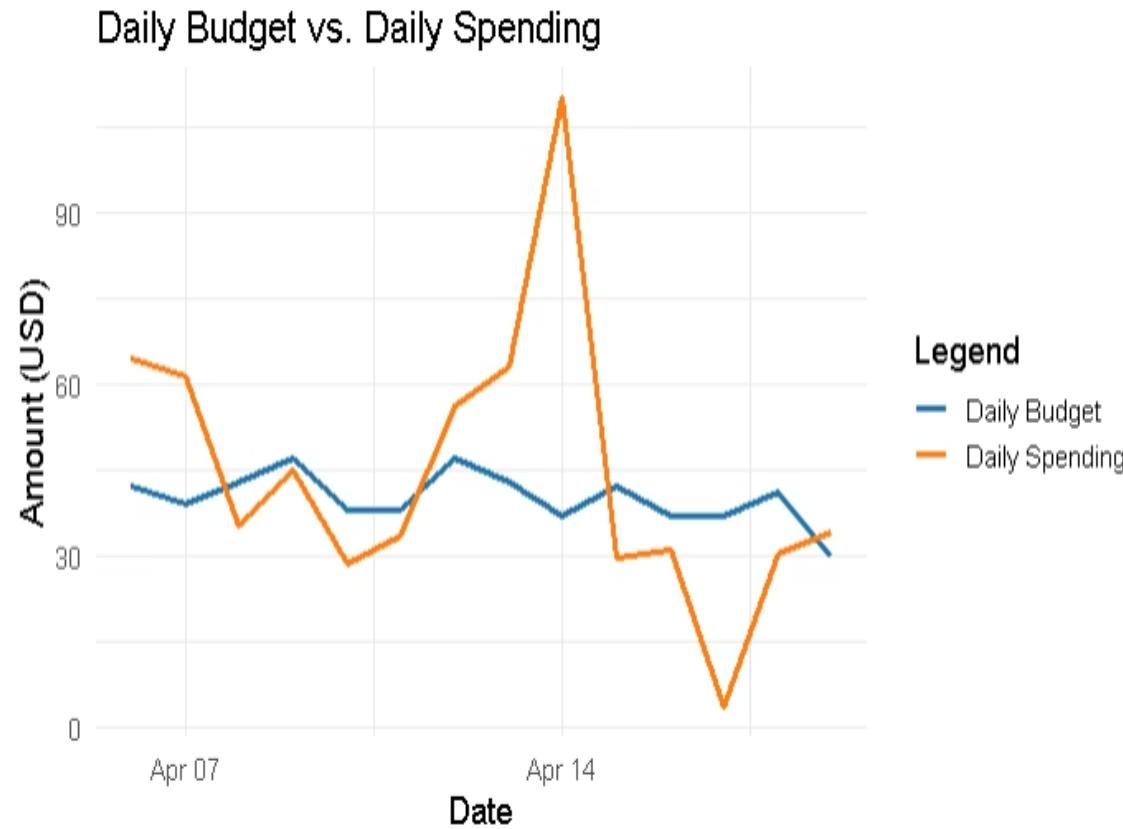

Key Observations

Spending exceeds budget on weekends

Patterns Revealed

Spending more volatile than budget

Daily Comparison: Bar Chart

Visual Encoding

X-axis = Days (1-14)

Y-axis = Amount (USD)

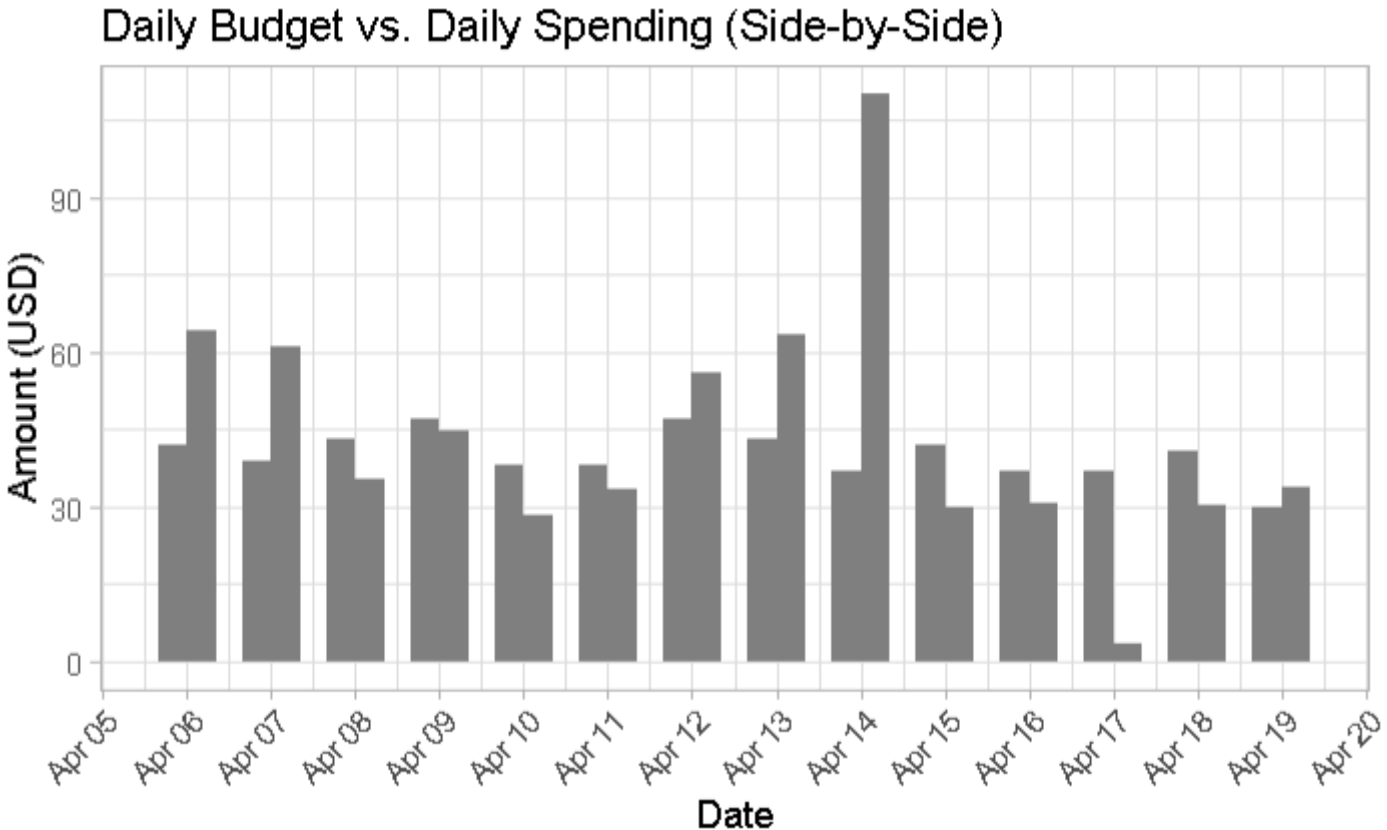

Insights

8 days under budget

6 days over budget

No days matched exactly

Largest variance: Day 14

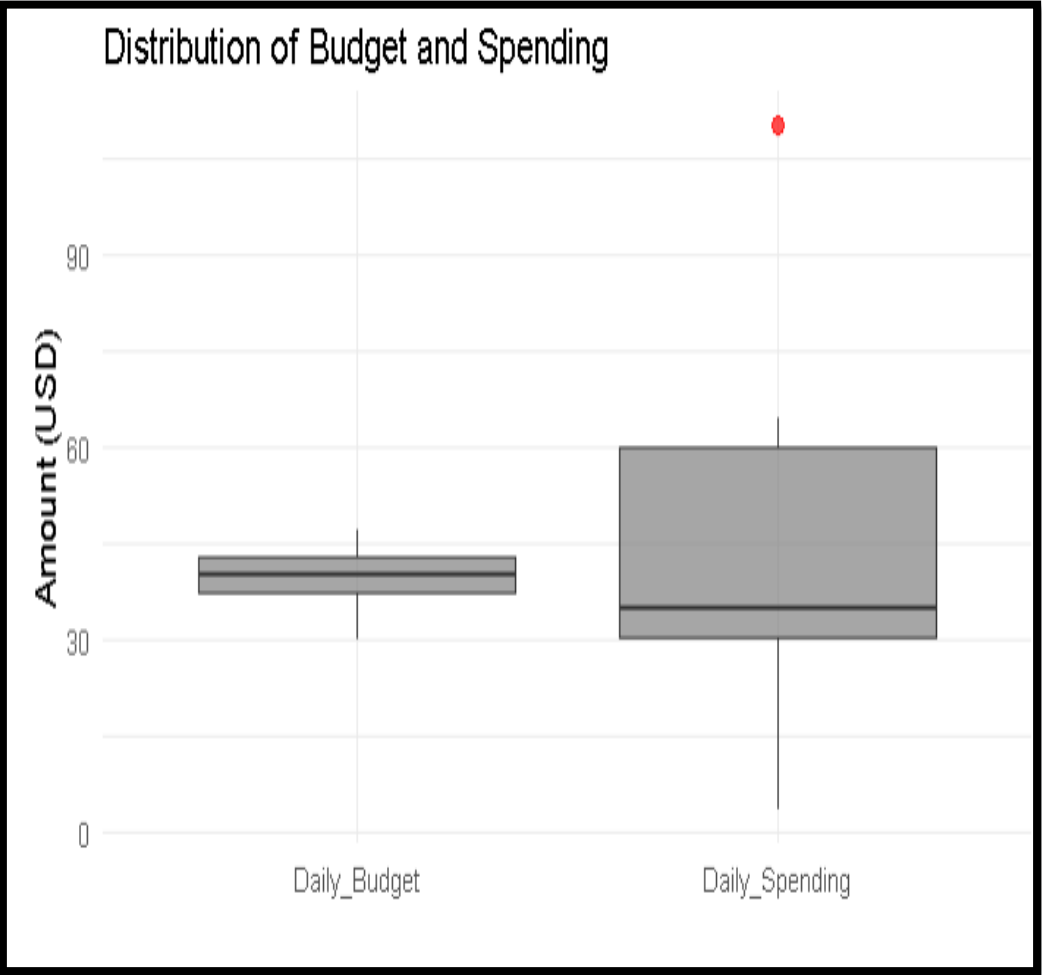

Distribution Analysis: Boxplots

Budget Distribution

Less variability in daily budget, indicating consistent financial planning.

Outlier Detection

Identification of two significant spending outliers, indicating days with exceptionally high spending.

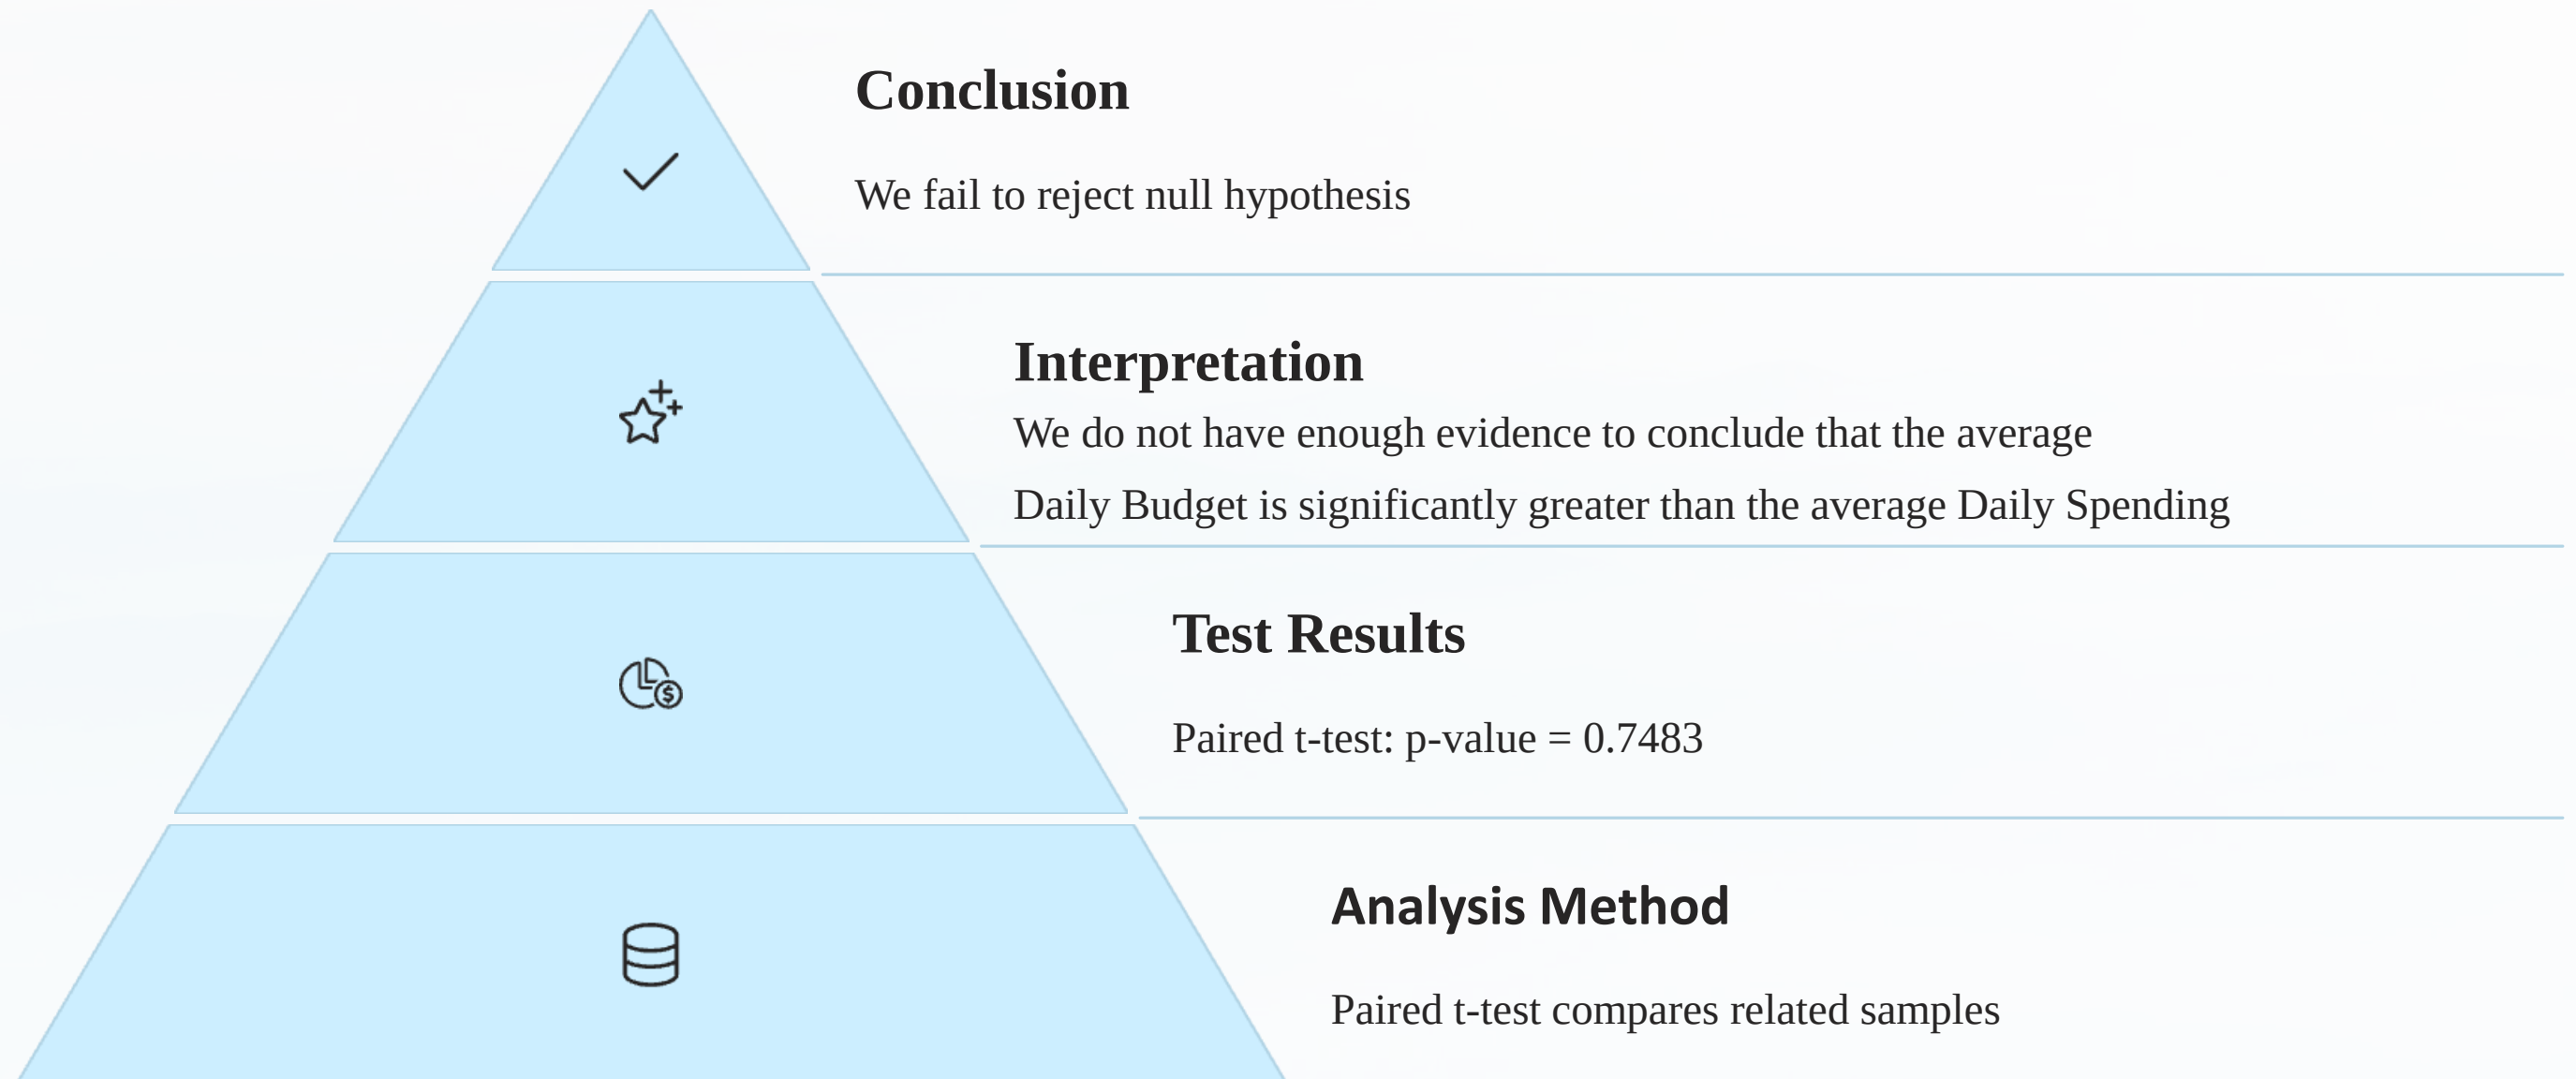

Spending Distribution

Wider range of variability in daily spending, suggesting unpredictability in spending habits.

Median Comparison

The median of daily spending is slightly higher than the daily budget, suggesting a tendency to spend more than planned.

Statistical Analysis

Conclusion & Reflection

Key Findings

Spending significantly deviates from budget

Learning Outcomes

Statistical testing validates visual observations

Future Applications

Budget adjustments based on spending patterns
